BAGLEY HYBRIDS

TEXAS-BRED STATE CERTIFIED

TEXAS YELLOW NO. 8

- *Cross between two inbred strains and Certified Yellow Surcropper.
- *Makes about 25% to 35% more corn per acre than native open-pollinated corn.
- *Excellent Drought Resister.
- *Grows Fast—Matures Quickly.
- *Medium Soft Yellow Grains.
- *High shell-out and good feed value.
- *Heavy ears well set on stalk—grains set tight on cob.
- *Especially recommended for areas where drought resistant corn is needed.

TEXAS YELLOW NO. 12

- *A combination of 4 inbreds.
- *Increases Yields from 20% to 35%.
- *Uniform soft grains of golden color.
- *Extra High Feeding Value.
- *Light, tight-fitting shuck; medium grains fit cob well.
- *Hybrid vigor makes it drought resistant.
- *For land and climate suitable for growing yellow dent corn.
- *Particularly suited for heavy or low land plantings but does well on any type of corn growing soil.

TEXAS YELLOW NO. 18

- An Excellent Double-cross Yellow Hybrid—All four inbred lines developed from Texas varieties.
- *High Yields—20% to 35% over native open pollinated corn.
 - *Real Drought resister; abundant root system.
 - *Large, soft, deep yellow kernels. Highly nutritious grain.
 - *Stout and strong stalks with well-set heavy ears.
 - *Good uniformity means even maturity and higher quality.
 - *Adapted to Southern soils and climate—outstanding for use wherever yellow dent varieties can be grown.

TEXAS YELLOW NO. 20

- *One of the newest of the Texas Hybrids. A good corn.
- *Yield compares well with No. 18. Makes from 20% to 35% more per acre.
- *Drought resistant, stiff stalks with vigorous root systems.
- *Grains large, medium hard, of the dent type and are a rich yellow color.
- *Tight shuck that covers the tip reasonably well.
- *Adapted to Southern soils and climate.
- *A good bottom or upland corn that will give you good results. Be sure to try some of it along with your other favorite numbers.

TEXAS WHITE NO. 9-W

- *Fine Double-cross White Hybrid improved over earlier Texas 7-W White.
- *Very Prolific—Makes 20% to 35% over ordinary open-pollinated varieties.
- *Grows Fast—Matures extra early—Widely used as roasting ear corn.
- *Beautiful soft white kernels tight set on the cob.
- *Medium size ear—Tight shuck coverage makes it resistant to ear worm and weevil damage.
- *Thrifty root system—Excellent drought resister.

TEXAS YELLOW NO. 24

- *Newest Double-cross Yellow Hybrid.
- *High-yielding—Drought resistant.
- *Nice ears with good shuck protection making it insect resistant.
- *Good size grains that are medium hard and of good color.
- *Stout, vigorous stalk with strong root system—resistant to lodging—matures in about 120 days.
- *Well adapted to southern corn growing areas. Try this Hybrid—it's a good corn.

State Certified PLAINSMAN COMBINE MAIZE

Proven to be one of the best varieties of combine maize. Head stands erect, is long, large and more compact. The grain is somewhat soft, large, reddish in color and shatter-proof. Our stocks all produced from bagged seed, properly cleaned on clipper machines, sacked in new, even weight 100 pound bags. Supply very limited—Order Now!

TEXAS WHITE NO. 11-W

- *The Latest Double-cross White Hybrid introduced first time this season.
- *Heavy producer—early maturing.
- *Medium ear with fine shuck cover—insect resistant.
- *Soft white grains well set on cob.
- *Grows fast—Good root system and sturdy, vigorous stalk.
- *Widely adapted to all corn growing soils. Include some of this on your order.

State Certified MARTIN COMBINE MAIZE

A very popular and widely grown variety that matures early, is uniform, non-shattering and disease resistant. Gives excellent yields of high feed value. Plant has long seed stems with long seed-heads that stand erect and are somewhat open and spreading. Seed are reddish and slightly hard.

GREAT COTTONS

BRED TO FIT YOUR LAND

BAGLEY B-17 ROYAL ROWDEN

NEWEST AND BEST YIELDING ROWDEN TYPE

Our B-17 Royal Rowden is new and different. It is fast becoming known as the cotton that is adaptable to most all soils and climates suited to cotton growing. It's very prolific and fast fruiting, making quite often from 15% to 25% more per acre than ordinary cottons. It has an upright, pyramidal stalk with well-spaced, short-jointed fruiting branches that produce big, fluffy bolls which open nicely and are easily picked. 50 to 60 bolls make a pound of seed cotton. It grows off extra fast, sets fruit rapidly, and opens early. The foliage is reduced to a minimum, affording less harborage for insects and allows crop to mature quicker. The good tap and lateral rooting system increases yield ability. The lint turnout runs from 37% to 40% dependent on land and season, and it has a hard, strong, uniform 31/32-inch to 1 1/16-inch staple, according to soil and season. It has uniform, medium to large size seed with well-filled, healthy kernels that give good germination. DROUGHT RESISTANT—STORM RESISTANT—WILT RESISTANT.

BAGLEY 793 MASTER STRAIN

REGULAR BAGLEY STRAIN

Our 793 Master Strain is a well-balanced, high yielding cotton that gives an excellent performance in the field, at the gin and on the market. Backed by 30 years of good, sound breeding work, it is very prolific, fast fruiting and often makes from 10% to 25% more than ordinary cotton. The upright, strong, sturdy stalks produce for you a strong, hard, uniform 15/16-inch to one-inch staple and a gin lint turnout of 40% to 42% dependent on soil and season. The long, short-jointed fruiting branches bear a majority of big, round, uniform five-lock bolls with slight point. Well-shaped bur makes it easy to pick. 50 to 60 bolls make a pound of seed cotton. It grows fast, fruits excessively and matures early. The medium foliage is adequate for proper boll protection during ordinary dry, hot summers. Its deep, penetrating tap roots and fine lateral rooting system often insure a crop in dry seasons when ordinary cottons fail. Has medium-size, uniform, high-quality seed that gives good germination. This cotton is very STORM PROOF, DROUGHT RESISTANT and has a HIGH VARIETAL PURITY.

BAGLEY 64 MASTER STRAIN

NEWEST REGULAR BAGLEY TYPE

Our NEW 64 Master Strain is an offspring of our 793 Master. It has shown up exceptionally well in our test plots for several years and promises to be an exceedingly popular strain. It has a majority of large, drooping, five-lock bolls that are easily picked yet storm resistant. 50 to 60 bolls per pound seed cotton—strong, compact stalk with long fruiting branches—grows fast, fruits heavily, matures early—has less foliage and good root system—gin turnout runs 38% to 40%—staple is uniform, strong, hard 31/32-inch to 1 1/32-inch. The 64 Master is drought resistant and high in varietal purity.

BAGLEY SPECIAL STONEVILLE 2-B

HIGHEST YIELDING STONEVILLE TYPE

Our Special Stoneville 2-B is a real money-making cotton, being especially adapted to valley land, bottom or rich, flat level land but also does well on any type of cotton-growing soil. It grows off fast, sets fruit quickly, matures and opens early. Its sturdy, upright stalk with vigorous, spreading, long, short-jointed fruiting branches produces medium to large fluffy bolls that open well and pick easy. 60 to 70 bolls make a pound of seed cotton. A large per cent of the bolls are five-lock. It is exceptionally high-yielding. Under favorable conditions increased production of 10% to 25% is often obtained. It gives an average lint turnout of 35% to 38%, depending on land and season and has a good character, uniform 1-inch to 1 1/8-inch strong staple, according to soil and season. The foliage is medium light, small leaves making it more insect resistant—crop matures quicker. The fine rooting system helps account for the extra high yields. Seed are medium size with well-filled, easy-to-germinate kernels. The storm proofness is excellent for this type of cotton.

W. W. BAGLEY AND SONS—MARTINDALE, TEXAS

3 OPEN-POLINATED CORNS

STATE CERTIFIED

YELLOW SURCROPPER CORN

A good medium-hard corn, adapted to most growing conditions in the South. Has large, broad, flat, yellow grains and ears are medium to large. It is an early maturing, exceptionally drought-resistant variety with medium stocky stalks, which usually "will make some kind of crop," even under conditions so adverse that some other varieties fail completely. Stock limited. Order your supply now!

WHITE SURCROPPER CORN

Latest Strain—truly a Surcropper—widely used. Recognized everywhere as the most drought-resisting, early maturing, and generally adaptable white corn for the Southwestern Corn Belt. Ears medium to large, with broad, flat, oily, white grains. Not a "show corn" but an "all-season," good corn for Summer planting. Supply very limited. Order now!

YELLOW DENT CORN

A good open-pollinated variety—widely adapted and particularly suited to bottom lands and rich upland. Gives fine yields of good quality corn and has a high shell-out percent. Well-liked for its nice feeding qualities. Matures in about 125 days. If you want a good yellow dent corn, order now as we have only a limited amount.

ORDER NOW

The demand is always much greater than the supply for Newest Improved BAGLEY Seed. We recommend that our grower friends order early—take a few minutes to fill out the form below and mail it to us TODAY.
